

# Analytics Dashboards

---

You can use Analytics to answer questions about your Research Assets, Researchers, Grants, and more. For example:

- Which of our Research Assets have been accessed in the last 30 days?
- Which Funders provided grants to our institution, and in what amounts?

If you have the Designs Analytics User Role, then you will see Analytics in the main menu. Select Design Analytics to open Analytics in a new browser window. You will notice that it has a different interface from the research repository.

Under Dashboards, you will see some subject areas specific to Esploro, such as Research Assets, Research Assets Usage, Researchers, and Grants.

Let's look at some examples.

On the Research Assets Dashboard, there are several tabs that you may find useful. These include Assets by Category and Type, Assets by Organization Units, and more. Each tab identifies a page containing one or more reports. Let's look at Assets with Files, as an example. After clicking on the tab, you can apply some filters. For example, Asset Creation Date limits the reports to research assets added within the given time period. This page has two reports, Number of Assets by File Format and Number of Assets with Files by Organization Unit. As you can see, some of the reports provide graphs illustrating the data. The reports can be saved and shared easily by printing or exporting them.

While the Research Assets Dashboard gives you different ways of looking at the research assets in your repository, the Research Assets Usage Dashboard shows you how those assets are being accessed. Here, you can easily see which assets and files are most popular. You can also see which asset requests have been denied. Take a look at each of the pages to see what information may be useful to you.

The Researchers Dashboard presents several displays of aggregated information about your researchers. Here you can find tabs such as Researchers per Asset Category and Type, Top 10 Researchers by published assets, and Researchers that have more than one current affiliation.

Let's take a look at the Research Grants Dashboard. This is Grants Overview. There are several other pages, including Grants by Investigator and Grants Added in the Last 30 days.

Those are some of the Dashboards in Esploro Analytics, where you can see out-of-the-box reports about your data in Esploro. To learn how to create a new analytics report, watch the next Esploro Analytics video.
