

Hybrid Collections in CDI

David Hanegbi

Discovery Operations Manager

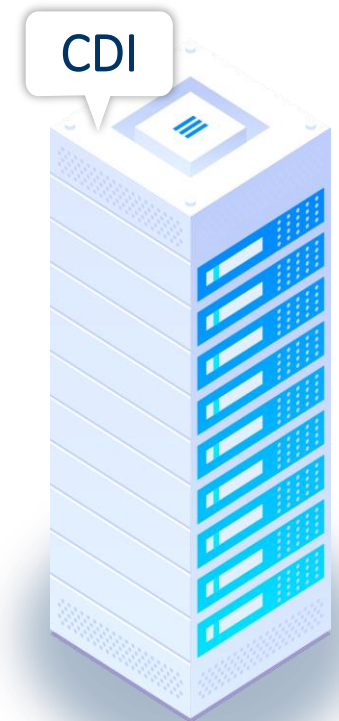

Agenda

- Background - Collection Types
- Hybrid Full Text Collections
- Hybrid A&I Collections
- Knowledge Article: [Hybrid collections in CDI](#)

Background – Current CDI Collection Types

- Full text collection with portfolios, using Link Resolver
- Full text collection with portfolios, using the Link in Record
- Database with Full text using Link in Record
- A&I database using Link Resolver

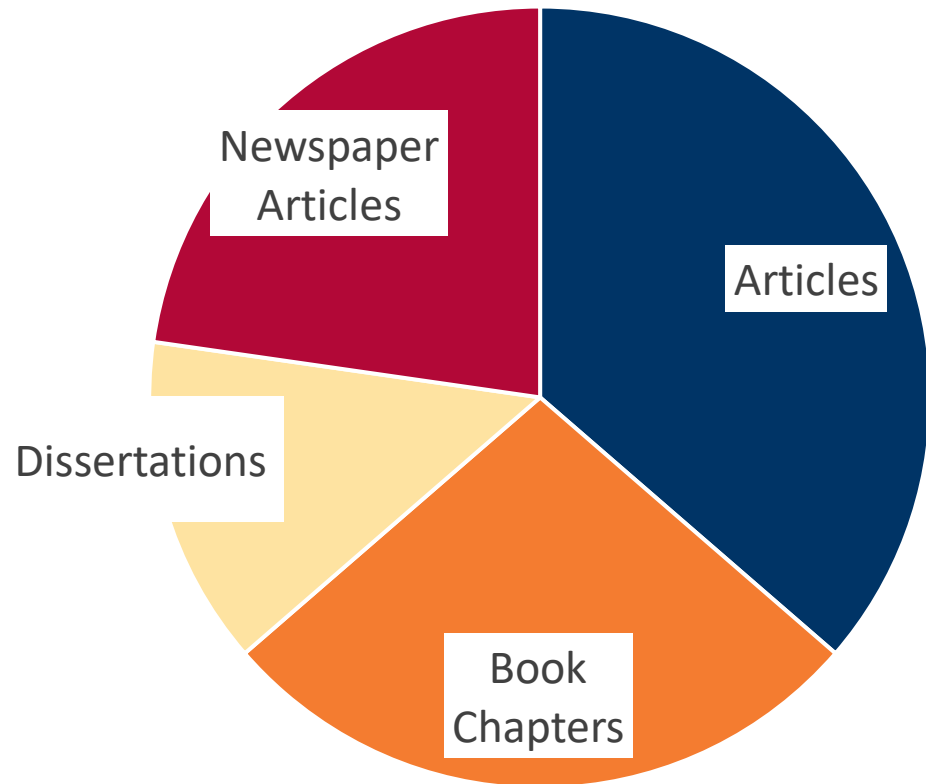

NEW: Hybrid Full Text Collections

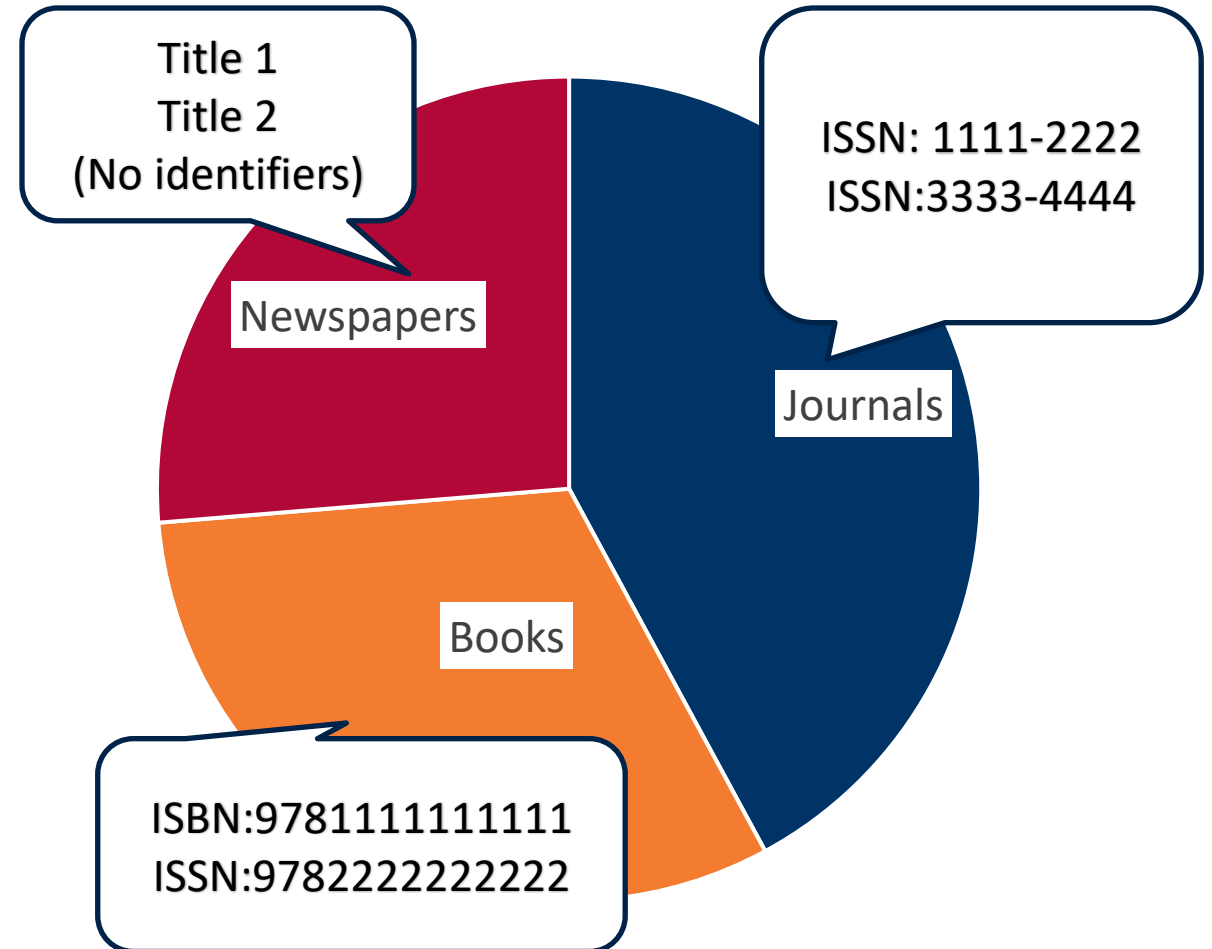

- Some collections contain a mix of content types: traditional academic content such as journals and books, but also non-traditional content types such as videos, images, etc.
- In Hybrid Full Text Collections, we use multiple linking methods in the same collection

What Mixed Collections Can Look Like

CDI Records

SFX/Alma Collection

Why We Need Hybrid Linking

- CDI Rights use
 - Title level – match by identifier
 - Collection level – all records of the collection
- “We subscribe to only some titles in this collection”
 - Yes – title level
 - No – collection level
- When the whole collection is Link Resolver
 - Title level – records without identifiers will not appear as “available”
 - Collection level – records without identifiers may have linking issues

“We subscribe to only some titles in this collection”

Electronic Collection Description General Additional Notes History CDI

CDI Institution Settings

CDI Search activation status Active Not Active

We subscribe to only some titles in this collection No Yes

Do not show as Full Text available in CDI even if active in Alma

Local Notes

How to Work with Hybrid Full Text Collections

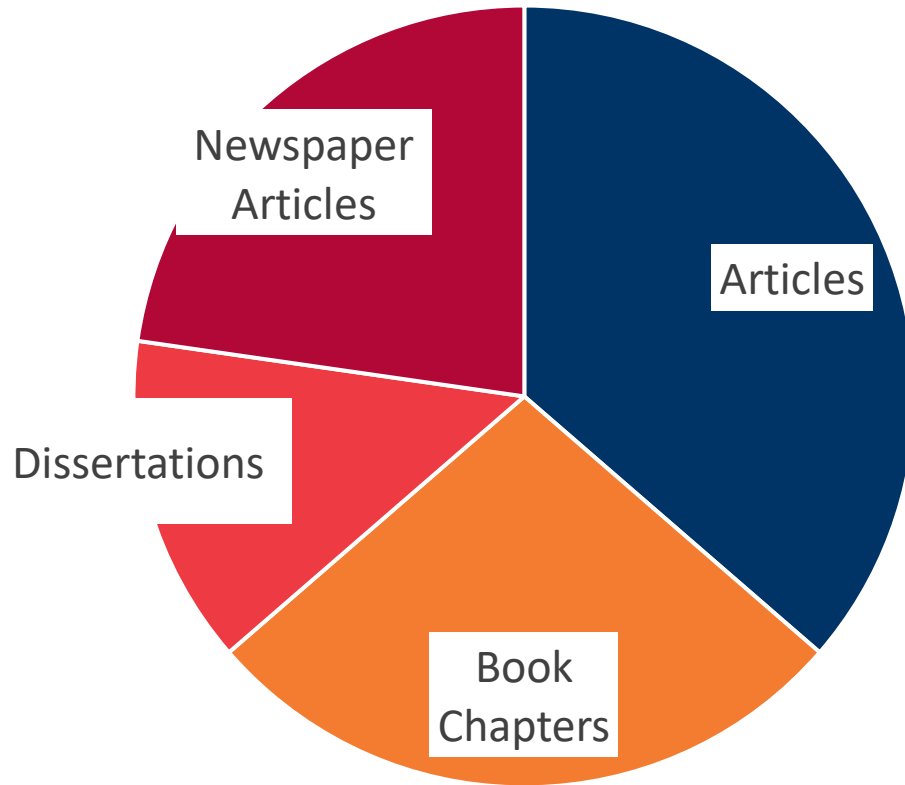

- ❑ Records with identifiers will work with the Link Resolver
- ❑ Records without identifiers (or of type dissertation) will work with Link in Record

Recommendation:

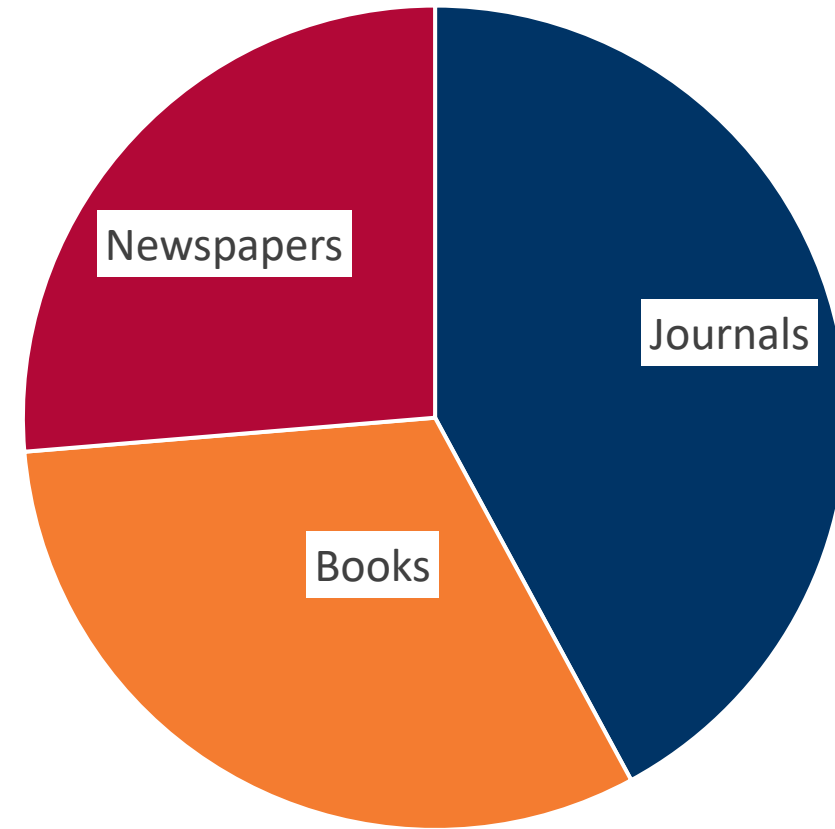

- **We subscribe to only some titles in this collection = No**
- All the collection's content will appear as "Fulltext available"

Example of Mixed Collections

CDI Records

SFX/Alma Collection

Using Alma Level URL (Override)

- Customers who have the Alma Level URL (Override) configured (as instructed in the [Configuring a Custom URL for Electronic Collections](#) guide) will be able to use it for the institution authentication for Link in Record content, in collections with portfolios
- For example: institution who added the URL (<http://search.proquest.com?accountid=XXXXXX>), will have direct links to ProQuest with the configured account ID which they need for authentication to PQ

DBIDs of Hybrid Collections

- Hybrid Collections have 2 DBIDs:
 - In the *Provider package code (DB ID)* field
 - In the *CDI Collection ID (DB ID)* field under CDI tab
- The main DBID is the first one
- The second is internal and used for calculating the hybrid linking.

Education Database			
Collection name	Education Database	Collection ID	612400000000000016
MMS ID	995553617800041	Provider package code (DB ID)	M0P,EDUXX

Our Plans for Hybrid Full Text Collections

- **ProQuest Central** is already using hybrid linking method
- **101 ProQuest collections** will be hybrid by end of September
The list is published in the Hybrid collections [CKC article](#)
- **Criteria used for PQ collection:**
Link in record when No Identifiers OR type Dissertation
- The **“Hybrid”** Indication on the SFX/Alma Collection will be added in October
In Hybrid Full text collection, it will be:

Full text Rights: Link Resolver

Linking: Hybrid

CDI Type: Full text collection

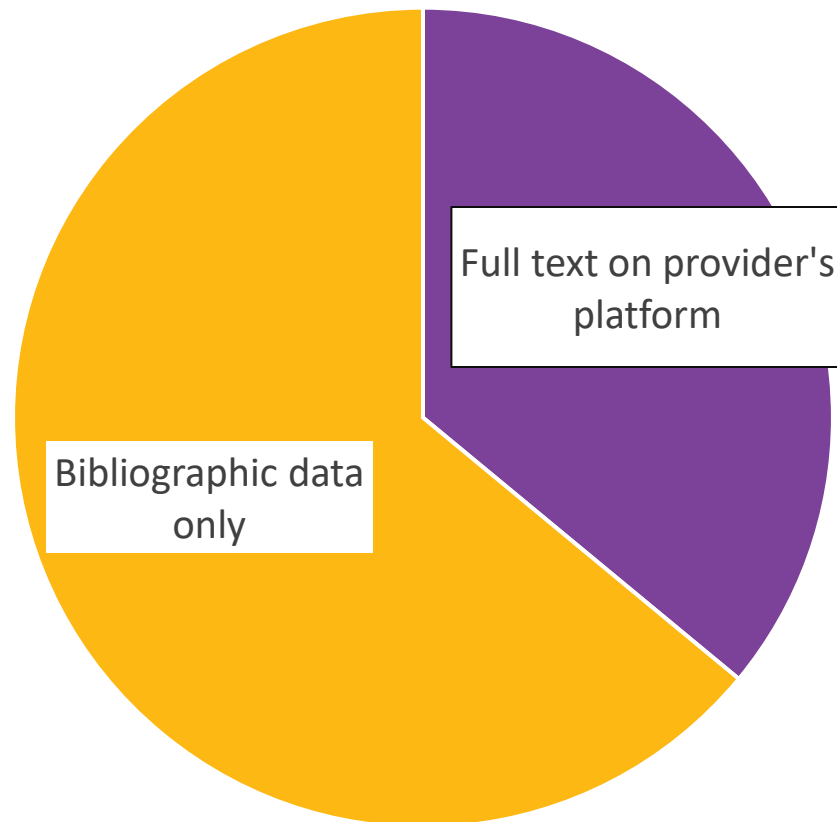

Hybrid A&I Collections

- Some Abstracting and Indexing databases (A&I) contain full text for part of their content
- In Hybrid A&I Collections, we will use Link in Record when the A&I provider offers access to full text on their platform
- A&I content with no full text on the A&I provider's platform:
 - Will appear as “Full Text Available” only if they match to other FT activations and will use Link Resolver to link to the FT platform
 - For example – Web of Science record will have link to ProQuest

Example of Hybrid A&I Collections Work

Rights: Will show as FT available if there is an identifier match to other FT activations

Linking: Link Resolver to the FT platform

Rights: Will always show as FT available

Linking: Link in Record – to the A&I Provider Platform

How to Work with Hybrid A&I Collections

- Hybrid A&I collections are collections of type Database
- The new behavior will be applied when:
 - A&I collection is Hybrid – check the list
 - A&I collection is active for full text in Alma
OR uses the “activate for Full Text in CDI only” setting

Our Plans for Hybrid A&I Collections

- **ERIC and ArtikelSök** are already Hybrid A&I collections
- More A&I collections will be added over time
- The “**Hybrid**” indication on the collection will be added in October

In Hybrid A&I Collection, it will be:

Full text Rights: Hybrid

Linking: Hybrid

CDI Type: Hybrid

Thank you!
