

## Content Operations

Dear community members,

I was pleased to have so many attendees at my latest webinar *Get to Know How New Collections are Added to the Knowledge Bases And CDI*. The recording and presentation are available in the [Knowledge Center](#).

Based on the feedback during the webinar, I would like to clarify some details regarding new content:

1. Idea Exchange is for missing collections and enrichment of existing collections in Alma, 360, SFX and CDI. Also for authority vocabularies in Alma, or other ideas to improve the way content is handled.
2. Missing titles from existing collections should be addressed in cases, as well as platform changes.
3. Missing collections from existing providers will be reviewed weekly, and voting on them is not required for adding the collection.
4. Each registered user has 50 votes for content ideas.

Since the beginning of the process on June 1<sup>st</sup>, community members already opened 49 ideas for existing providers, which have been reviewed and taken up with the providers for follow up.

Thank you for pointing out these content gaps, and helping us improve the Knowledge Bases and CDI.

Another improvement we implemented this passing month is adding Collection ID in the release notes for upcoming removals, name changes and new collections. Check it out, and let us know what you think!

And last, the Q3 roadmap is now out – there is exciting new content on its' way to the Knowledge Bases and CDI.

The updated roadmap is available under all products' Content Corners –

Alma
