## Overview

In keeping with our commitment to support academic consortia, SFX is expanding its KnowledgeBase to include new subtargets, representing special packages created by information providers for their consortia customers.

Consortia packages may differ from full collections in a number of ways, such as the number of portfolios included or the coverage dates for these portfolios. Alternatively, consortia packages may be identical to the existing full SFX target. Note that Ex Libris adds a separate consortium package only if the consortium package is not identical to the global one. The library can, of course, change the public name of the existing target to reflect the consortium name.

Consortia packages appear as sub-targets under the relevant vendor interface – that is, Nesli2 SpringerLink Journals appears under the `SPRINGER_LINK` interface.

Listed below are the consortia packages in the SFX KnowledgeBase, as of the 20080801 revision.
