Service Pack No:

Version 1.2.0, April 2010

Highlights:

1. SUSHI is now supported.
2. It is now possible to download vendors' report files from UStat.
3. UStat reports now display statistics for multiple years.

General Documentation for Service Packs:

In the Ex Libris Documentation Center:
UStat\UStat_User_Guide.pdf
Version 2.0\Staff User Information\Verde_Staff_User_Guide.pdf (Verde interoperability with UStat)
UStat\Ustat_1.2.0_Release_Notes.pdf

Description	Solution	Related Documentation	Implementation Notes	Module	SI Number
Usage Statistics harvesting mechanism was not available.	SUSHI is now supported. Data can be automatically harvested using vendor-provided Web services that comply with the SUSHI protocol and this data can then be loaded into the UStat database. The currently supported vendors are the following: - American Chemical Society - Cambridge University Press - EBSCO Publishing - HighWire Press - IOP Publishing - MetaPress - Oxford Journals	UStat User's Guide		General	
A file uploaded to the Usage Statistics Service could not be exported using this application.	It is now possible to open/download vendors' report files from the Usage Statistics Service. Invalid files are also saved in UStat and the list of errors can be viewed on the Details page, allowing manual format adjustment and reloading.	UStat User's Guide		Administration	16384-161533
UStat reports were limited to a period of one year.	UStat reports now display statistics for up to 12 years. The multi-year reports serve as a tool for comparing the usage statistics data over several years.	UStat User's Guide		Reports	
Sorting the results was possible by Total usage, but not by monthly usage (for example, in the list of journals delivered by a certain platform).	The results can now be sorted by monthly usage.	UStat User's Guide		Reports	
When reports were loaded to the Usage Statistics Service, the input values for future months were also loaded.	The input values for future months are now ignored.	UStat User's Guide		Administration	16384-142885

Description	Solution	Related Documentation	Implementation Notes	Module	SI Number
The time recorded in the Usage Statistics Service (for example, file upload date, reports export date, etc.) was the server time (that is, GMT -6 hours, Chicago time)	This has been corrected to enable conversion of the displayed time to local time zones.		Submit a support incident if you require a time adjustment.	General	16384-133265
Drill-down reports were available for zero summary (for example, in the Databases Accessed by Subscriber, if a summary for a certain year was zero, it was possible to click the zero value and navigate to an empty report).	If a summary for a certain year is zero, the zero value is now displayed for information only, with no option to click the value and navigate to a more detailed report.			Reports	
When files were deleted from the statistics tool, the confirmation dialog box did not display the name of the file that was to be deleted.	This has been corrected to display the file name in the confirmation dialog box.			Administration	16384-139687
If the Confirm Deletion button in the dialog box that opened when the user attempted to delete a file was clicked more than once, a global error was displayed due to the database deadlock.	The Please Wait message (the same as the one displayed when loading) is displayed after the Confirm Deletion button is clicked, and the button is disabled after the first click.			Administration	
In the Database Usage Statistics report for a subscriber/platform, the default sort was by total database sessions.	The default sort is now by database name.			Reports	
When exporting reports, the format of the start date was different in different reports.	This has been corrected to display the start date consistently formatted in all types of exported reports.			Reports	16384-140338
When exporting reports into Word format, the report data appeared with broken hyperlinks.	The hyperlinks are now removed from the reported data.			Reports	
The headers appeared differently in reports and exported files ("Title Identifier" vs. "TitleIdColumn," "Month 1 Usage" vs. "MONP0," etc.)	This has been corrected to display the headers consistently across the system.	UStat User's Guide		Reports	16384-140362

Description	Solution	Related Documentation	Implementation Notes	Module	SI Number
When viewing the Details page, the text was sometimes displayed with overlapping lines.	This has been corrected to display the file details properly.			Administration	
The word Verde appeared in the user interface (for example, Verde Usage Statistics Service).	UStat, the new term, appears now instead of Verde.			General	
Button names were capitalized inconsistently (for example, **Upload File**, but **Confirm deletion**).	Buttons now appear consistently with the first letter of each word in uppercase (for example, **Upload File**, **Confirm Deletion**).			General
