

ExLibris Verde

Service Pack No:

752, December 2011 (735-752)

Highlights:

Verde can now work with SFX 4. Customers who choose to upgrade the two systems will enjoy faster and simpler data sharing between SFX and Verde. Further information about this change can be found in the *Verde Staff User's Guide for SFX 4*.

Change Number	Description	Solution	Related Documentation	Implementation Notes	Module	SI Number
735	When loading a license input file with an invalid value in the Local licensing negotiator field, the following error message was displayed: reject '0' .	The error message has been changed and is now more informative.			KB Tools	16384-111258
736	When using the e-standalone loader to create an e-standalone record connected to an existing work record, a new work record was created instead and the newly created e-standalone record was connected to it.	This has been corrected.			KB Tools	
737	More changes have been made to Verde in anticipation of the release of SFX 4.1 and the new harvesting feature.		Staff User's Guide for SFX 4		General	
738	In CJK environments, the Jump to box was not effective in finding titles.	A Search button has been added next to the Jump To button in e-package and e-interface lists.			General	16384-190279
739	The Updated e-Constituents report in the KB Tools module's KB Update Reports was missing data in the Package e-Product Status and Package Type columns. The New/Updated Work reports were missing data from the Categories column, and did not include e-Product Type as an output field.	The e-Product Type field has been added to the New/Updated Work reports, and the correct data is now displayed in the other mentioned columns.	KnowledgeBase Update Process and Instructions		KB Tools	16384-48976, 8192-56944
740	Some global coverage records were deleted under certain circumstances.	This has been corrected and these global coverage records have been returned to the system.			KB Manager	16384-206987

Change Number	Description	Solution	Related Documentation	Implementation Notes	Module	SI Number
741	Some of the details of scheduled reports/tasks were not displayed in Scheduled Reports/Tasks tool, even though they were saved correctly.	The details are now displayed properly.			KB Tools	16384-183159
742	E-Mails that were sent out to notify that reports were completed did not include the name of the report.	E-Mails now include the report name.			KB Tools	16384-177223
743	In some cases, the Verde License Renewal task was not catching all the licenses it should have (due to the task not taking the days before expiration parameter into account).	This has been corrected.			KB Tools	16384-173631
744	When opening the pop-up window to select an interface provider for an e-interface, the only organizations that appeared in the list were ones that had the role of interface provider assigned to them, even if the list was filtered to show all roles.	This was changed, and now all the organizations are displayed in the list, with an option to filter by interface provider role.			KB Manager	16384-91852
745	When a localized e-constituent in an aggregator package was withdrawn by the publisher, the e-constituent was deleted (as opposed to e-constituents of selective packages, which received a selection status of Withdrawn by Publisher).	Now, the localized e-constituent will have a selection status of Withdrawn by Publisher instead.			KB Manager	16384-66405, 152155

Change Number	Description	Solution	Related Documentation	Implementation Notes	Module	SI Number
746	When printing an acquisition record, related e-products were shown on the printout (title and e-product code), but related e-products were not shown on printouts of license records.	Related e-product information is now shown on both acquisition and license printouts.			KB Manager	16384-117331
747	When using the organization contact loader to update existing contacts, if the input file included the main contact, that row was rejected and following error message was provided: This row has been rejected; library/organization cannot have more than one main contact.	This has been corrected.			KB Tools	16384-100590
748	Previously, if a user changed the name of the Sponsoring Library label (which can be changed by editing the value of <code>eproduct.general.sponsoringLibrary</code> in the <code>message.properties</code> file under <code>/exlibris/verde/v2_4/verde/home/system/conf/i18n/</code>), the new label did not appear for e-standalone records that had a value in the field (rather, it displayed Sponsoring Library).	This has been corrected, and the new label now displays in all cases.			KB Manager	16384-118010

Change Number	Description	Solution	Related Documentation	Implementation Notes	Module	SI Number
749	In some cases, when adding local acquisition records to an acquisition record so that the sum of the cost shares adds up to exactly the amount of the final price of the acquisition, an error prevents the last local acquisition from being added. The error message reads: The total of all cost shares exceeds the price of the acquisition record.	This has been fixed, and the last local acquisition record is now saved successfully.			KB Manager	16384-116981, 16384-139803
750	For some customers, when creating acquisition and bib records in Aleph from Verde, a title that combined Japanese and Latin characters would display with question marks in Aleph and the Japanese characters would not be displayed correctly.	Both the Japanese and Latin characters now display correctly.			KB Manager	16384-203140
751	If the list of active libraries for an e-product was between 900 and 4000 characters, the system did not know how to deal with it. This would cause the system to refuse to open this e-product. (There was no problem with lists shorter than 900 characters or ones that were longer than 4000.)	The gap has been closed, and the system can now handle library lists between these lengths.			KB Manager	16384-210996
