

## Z700 – ILL Partner

The Z700 is a pw\_library Oracle table that contains administrative information about ILL Partners.

An ILL partner is an administrative unit that sends ILL requests to you and/or that responds to your ILL requests for material. Each library or institution that is used as a player (requester or supplier) in the ILL flow, including your own administrative unit, has a partner record in the system.

There are three types of partners: internal partner, shared external partner, and non-shared external partner.

- **Internal Partner – also known as ILL Unit** – local administrative unit that handles ILL borrowing and lending activities. An ILL unit can be set up to represent a single sublibrary or a group of sublibraries.
- **Shared External Partner** – a supplier or a requester library which is not a part of any ADM library of your library system; it is external to your library system (for example, another library or a supplier like BLDSC). An external shared partner can be used as a supplier by all ADM libraries.
- **Non-shared External Partner** – a non-shared external partner is the same as a shared external partner, but it can be used as a supplier only by the library which created the partner record.

Each ILL partner (both external and internal) to whom you supply ILL material must have a parallel Patron record.

In the following Z700 table, (X) denotes an alphanumeric field and (9) denotes a numeric field. All alphanumeric fields are left-aligned with trailing spaces; all numeric fields are right-aligned with leading zeros. Decimal positions are indicated by the symbol V. The total number of decimal digits is designated by the number of nines following the V. Note that the decimal point is not stored in the field (for example, if the field definition is 9(4)V99, then 1000 = 10.00).
