Z70 – VENDOR

The Z70 table contains administrative information about acquisition vendors. The Z72 (Vendor Address record) table complements it. Optionally it can also be complemented by Z602 (sublibraries/ordering units).

In the following table, (X) denotes an alphanumeric field and (9) denotes a numeric field. All alphanumeric fields are left-aligned with trailing spaces; all numeric fields are right-aligned with leading zeros. Decimal positions are indicated by the symbol V. The total number of decimal digits is designated by the number of nines following the V. Note that the decimal point is not stored in the field (for example, if the field definition is 9(4)V99, then 1000 = 10.00).

Z70-REC-KEY			
Z70-VENDOR-CODE	M	X(20) Upper case	DESC: Unique key by which the system identifies the vendor. CONV: Relevant code.
Z70-SUB-LIBRARY	O/ M	X(5)	DESC: Sublibrary code or ordering unit to which the vendor is related. If the ordering unit mechanism is not used (the USE-ORDER-UNIT flag in the data_tab/tab100 table is set to 'N'), this field contains a sublibrary code. If the ordering unit mechanism is used, then this field contains the relevant ordering unit. The field is only relevant for sites that work with a two-level vendor setup (the TWO-LEVEL-VENDOR flag in the data_tab/tab100 table is set to 'Y'). In this case, each vendor has a Z70 generic record with an empty Z70-SUB-LIBRARY field and one or more Z70 records (with the same Z70-VENDOR-CODE) for specific sub-libraries or ordering units. When the vendor records is used in the system, the sublibrary/ordering unit specific record overlays the generic one. The data_tab/tab_vendor_sub_lib table defines which group of fields of the Z70 is taken from the vendor sublibrary/ordering unit record and which group of fields is taken from the generic record. Note that regarding vendor usage permissions, there is no need for matching Z602 records for the sublibrary or ordering unit of the vendor specific records. The vendor's generic record will automatically be granted usage permissions for the sublibrary or ordering unit defined in the vendor specific records. CONV: Blank or relevant value. If the TWO-LEVEL-VENDOR flag in the data_tab/tab100 table is set to 'N', this field must be left blank. If flag is set to 'Y', then there should be one generic record for each vendor where the field is blank and related sublibrary/ordering unit records marked with the relevant code.
