# 1

---

## Infrastructure

### 1.1 Upgrade Solr to SolrCloud

Major upgrade of Solr to SolrCloud, providing high scalability, fault tolerance and distributed indexing.

Each institution will have the ability to define number of replicas of the indexing shards, providing a fault tolerant cluster of Solr servers.

Detailed configuration guide can be found [here](#).

### 1.2 Upgrade to Java 11

Major upgrade to the latest version of Java 11.

### 1.3 Additional Upgrades

- **Universal Viewer v2.0.2**
- Additional XSLs upgraded to use **XSLT 2.0**

# 2

---

## System Setup

### 2.1 Simplified system setup

As part of an on-going effort to facilitate the system configuration, 6.1 will define a “slim” and clear material flow setup which will be available for a default basic staff profile.

The flow will not include configurations which are rarely used by customers, particularly not at the initial implementation phase. These can be applied at any later stage.

### 2.2 Enhanced out-of-the-box configurations

Additional out-of-the-box setup options will provide a more streamlined material flow setup experience. These will include Bagit ingests and adjustments / additions to others.

# 3

---

## Data Management

### 3.1 Unassign SIPs

Enable assessors / approvers / arrangers to unassign SIPs assigned to another staff member:

Figure 1 3A Unassign

### 3.2 Get SIP Status API to return number of IEs

Number of IEs contained in the SIP will be returned for the following API calls:

`getSipStatusInfo`

`getSipsStatusInfo`

`getSipStatusInfoByExternalId`

providing further data on the SIP status.

# 4

---

## Delivery

### 4.1 Advanced viewer configuration

Multiple configuration options were added to the embedded IE viewer, including the following:

- **Single File Download:**

*Figure 2 Single file download*

Which is configurable independently of the existing “Download All” option:

*Figure 3 Download configurations*

- **Download-all to reflect structure of displayed structmap** (see image above)

Download-all will now include 3 configurable options:

1. Existing option - Download all representations, regardless of structmap structure
2. Existing option – Disable download-all
3. New option – Download selected representation, according to content structure of the displayed structmap.

- **Enforce Download**

Added configuration to the streamgate file viewer, which will prevent the browser from rendering the file and display a download link instead, with data on the file label, name and size:

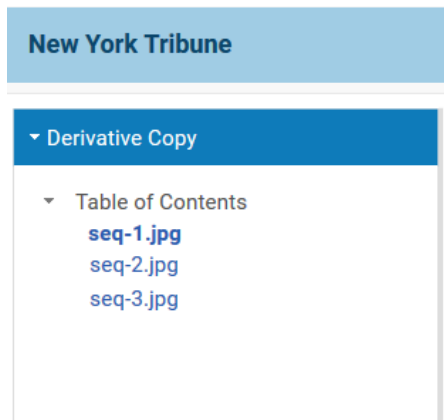

*Figure 4 Enforce download*

Add output parameter `direct=false` to enforce download.

- Configure visibility of metadata and content panes. Options are:
  - **Table of contents.** Parameter `toc_pane` =
    1. `Show` (default) – Show contents pane by default
    2. `Hide` – Hide contents pane by default. User can open the pane
    3. `None` – Pane doesn't appear and cannot be opened by user
  - **Metadata pane.** Parameter `md_pane` =
    1. `Show` (default) – Show contents pane by default
    2. `Hide` – Hide contents pane by default. User can open the pane
    3. `None` – Pane doesn't appear and cannot be opened by user
- Configure visibility of **search box** in table-of-contents, by setting parameter `search = none / show`.

*Figure 5 Hide search box*

## 4.2 Improved Viewers' Usability

Enhancements in the various embedded viewers in Rosetta, include:

- Allow users to navigate between files from the full-screen mode of the IE Viewer:

Figure 6 Navigate from full view

- Configure Universal Viewer to download original hi-resolution image:

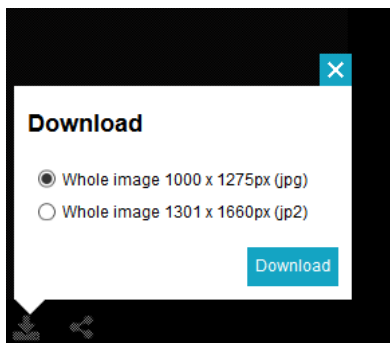

Figure 7 UV download original

- Rotate and print added to OpenSeaDragon file viewer:

Figure 8 Rotate and Print from OS

## 4.3 New out-of-box Audio/Video Viewer

Video.js v7.4.2 added as a file viewer for audio/video content, providing advanced and user-friendly viewing experience:

Figure 9 Video.js

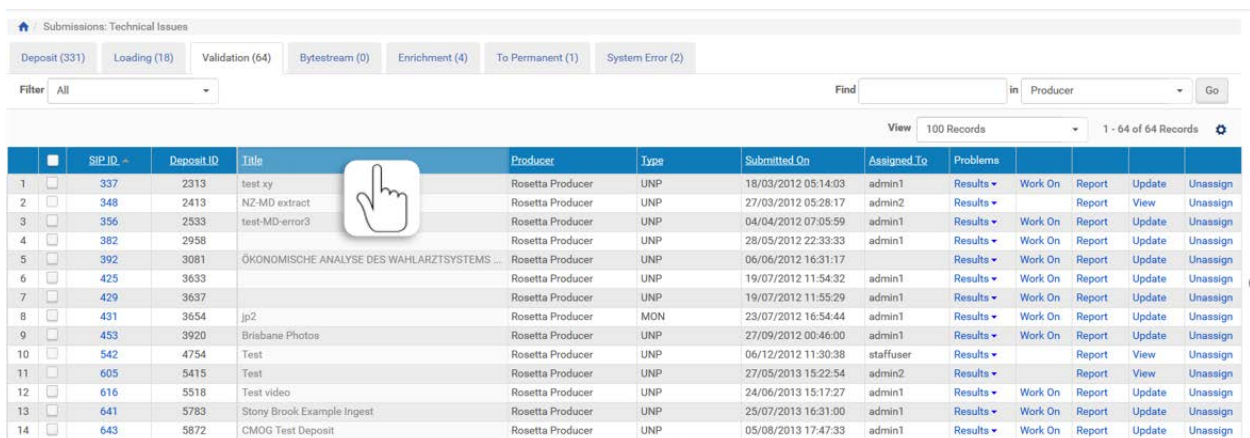

# 5

## User Experience

### 5.1 User Preferences

TA workbench is now customizable, expanding the existing list of customizable pages in Rosetta.

Customizable elements include paging size, sorting, order and width of columns, which will be saved cross-session per user.

Submissions: Technical Issues

Deposit (331) Loading (18) Validation (64) Bytestream (0) Enrichment (4) To Permanent (1) System Error (2)

Filter: All Find: in Producer Go

View: 100 Records 1 - 64 of 64 Records

## Preservation

### 6.1 Format Library Releases

Introducing additional information to the Format Library management page - deployment date for all releases, including manually uploaded releases:

The screenshot shows a web interface for managing format library versions. At the top, there is a breadcrumb navigation: [Home](#) / [Preservation: Manage Format Library Version](#). Below this, there are two main sections:

- Available Versions:** A table with columns for Version, Release Date, and actions (Reinstall, Release Notes). The current version is 5.5094, released on 17/04/2019 at 07:48:20.
- Deployment History:** A table with columns for Version and Deployment Date. It shows two deployments: version 5.5094 on 26/06/2019 at 21:40:36, and version 4.11 on 26/06/2019 at 21:37:31.
