Patron has exceeded the number of hold requests allowed (for items at Bindery)

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 18.01

**Problem Symptoms:**
* We want OPAC users to be able to place a hold on items at bindery (item process status 'SB')
* SB is defined in tab15.eng as allowing holds with no availability check (column 8 = C) but recalls are not allowed (col 13 = N)

The result is that when an attempt is made to request an item from the bindery in the OPAC, the user gets error message 1135: "User has exceeded the number of hold requests allowed."

**Cause:**
Table tab16, col. 13 (maximum number of hold requests) for line with 'SB' in col. 3 (Item process status) is exceeded

**Resolution:**
Adjust col. 13 of ./xxx50/tab/tab16 to the correct number.

**Additional Information**

Error message 1135 is invoked when:

1. `check_hold_request_h` is specified in `tab_hold_request`; and

2. the `tab16` col.13 (maximum number of hold requests) value for the relevant `tab16` line is exceeded.

Since a non-blank item-process-status takes priority, in this case, the relevant `tab16` line is the line with "SB" in column 3 and the patron's status in column 4.

If there is no item processing status for this item, then the relevant `tab15` line is that for the `z30_item_status`.
