Aleph xxx50 library created as sublibrary in Alma

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 20, 21, 22, 23

**Problem Symptoms:**
When the Aleph-to-Alma migration scripts are run, the XXX50 ADM library is created as a library in Alma; it should be treated as an institution. (Note: the Alma "library" is the same as a sublibrary in Aleph.) The $alephe_tab/tab_sub_library.lng has the following entries:

```
XXX50 1 XXX50 L xxx Admin Lib XXX15 16T 17A ALEPH
MAIN 1 XXX50 L Main Library XXX15 16T 17A ALEPH
SCI 1 XXX50 L Science Library XXX15 16B 17B ALEPH
<etc.>
```

Is the "XXX50 1 XXX50 ..." line necessary for the functioning of Aleph? Or could it be deleted?

**Cause:**
Incorrect value in tab_sub_library.lng column 2. As can be seen in the distributed ./alephe.orig/tab/sub_library.eng, the ADM library needs to be there, but column 2 should have a value of "2" rather than "1".

**Resolution:**
In the Aleph tab_sub_library.lng, correct:

```
XXX50 1 XXX50 L xxx Admin Lib XXX15 16T 17A ALEPH
```

To:

```
XXX50 2 XXX50 L xxx Admin Lib XXX15 16T 17A ALEPH
```
