Suppressing xxx30 Course doc record not working correctly in v19 OPAC

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 19.01

**Description:**
When I use the new Suppress button in version 19 course reserves, it does not suppress the bib record from displaying. Instead, both the connection and the bib record display.

What do I need to set up so that a bib record will be suppressed from display in the course reserves OPAC?

**Resolution:**
The problem was that the word being generated by tab11_word and tab_word_breaking for the STA $$asuppressed field was not "suppressed" but rather "asuppressed".

This is because the tab11_word specified a word-breaking routine of 03 and tab_word_breaking routine 03 lacks the del_subfield routine.

util f/1/28 showed this:

```
STA $$aSUPPRESSED
Load: /utf/utf_files/exlibris/aleph/prod/abc/abc30/tab/tab_word_breaking
Load: /exlibris/aleph/prod/alephe/unicode/tab_character_conversion_line
Load: /exlibris/aleph/prod/alephe/unicode/unicode_to_word_gen
000002924 0001 0001 asuppressed
000002924 0001 0013 asuppressed
```

After changing tab11_word column 6 to "01", we see this:

```
STA $$aSUPPRESSED
Load: /utf/utf_files/exlibris/aleph/prod/abc/abc30/tab/tab_word_breaking
Load: /exlibris/aleph/prod/alephe/unicode/unicode_case
Load: /exlibris/aleph/prod/alephe/unicode/tab_character_conversion_line
Load: /exlibris/aleph/prod/alephe/unicode/unicode_to_word_gen
000002924 0001 0001 suppressed
000002924 0001 0013 suppressed
```

I see that the usm30 tab11_word, from which your line was no doubt copied, also has this defect. We have requested that the distributed v19 and v20 usm30 tab11_word tables have this corrected.
