360 KB: BIBSAM Databases Available

- **Product:** 360 KB

What BIBSAM collections are available in 360 KB?

Member libraries of BIBSAM, a library consortium operated by Kungliga biblioteket, the National Library of Sweden, have access to a number of collections (databases) that Serials Solutions tracks in the 360 KB knowledgebase.

A list of those databases is available as an Excel spreadsheet [here](#).

Besides database names, the spreadsheet provides the following information:

- The name of the provider under which the database can be found in the Client Center's e-Catalog
- Serials Solutions' unique database code
- Whether the database was created specifically for the consortium, or if it is a database available to any library
- Whether the database has cover-to-cover full text available:
  - If yes, any library can see the database in the e-Catalog and subscribe to the database.
  - If no, only libraries that have access to 360 Resource Manager, 360 Search, or Summon will be able to see and subscribe to the database. The database must have a connector to work for 360 Search (see the list of available [connections](#)), and must be included in the Summon™ Index to work for Summon.
- The name on the KB+ site (if applicable)

To receive an email whenever there are changes to the spreadsheet, click the **Follow Me (currently not available)** link above.
