360 Core: Library-Specific (Library-Managed) Holdings Database -- Overview

- **Product:** 360 Core Client Center

How do I create and manage a library-specific holdings database?

Background information on why you would want to use a library-specific holdings database (also called library-managed holdings or locally-managed holdings) can be found [here](#).

The process for creating and adding titles to a library-specific holdings database comprises several steps, which are outlined in different places here in the Support Center. You can find the full process in the downloadable [Client Center User Guide](#), or use the following links to specific steps in the process:

1. Creating a New Library-Specific-Holdings Database
2. Adding Individual Titles to Your Library-Specific Holdings Database
3. Uploading Multiple Titles to a New Library-Specific Holdings Database
4. Viewing Your Upload Status
5. Upload Status Errors
6. Updating Your Library-Specific Holdings Database
7. Deleting Titles

**Note**

- If your library subscribes to Summon or 360 Link, please read about some issues that occur with library-specific holdings databases and those two services.
- If your library subscribes to 360 Search, Library Specific Holdings (LSH) databases will not appear in your database lists.
