How do I configure the E-Journal Portal using the Administration Console?

Using the Administration Console, you can easily configure your library's E-Journal Portal to fit the needs of your patrons. For information about the functionality and installation of the E-Journal Portal, please read the E-Journal Portal User Guide.

To go to the 360 Core Administration Console:

1. Go to Intota or the Client Center (whichever platform your library uses).
2. Click the Administration Console link.

View of Intota:

![Intota View](image)

View of the Client Center:
If you do not see an E-Journal Portal / 360 Core Administration Console link, your user account likely needs permissions for doing this customization work. Depending on your current permissions you may be able to edit permissions yourself: Intota users click [here](#); Client Center users click [here](#).

In Intota or the Client Center you will then see the Administration Console, with the E-Journal Portal tab selected, and the **Languages** page open:

Note the **+2.0** icon that indicates the admin page applies to the enhanced **E-Journal Portal 2.0** in addition to Legacy E-Journal Portal. Libraries using E-Journal Portal 2.0 will also want to consider customization options on the **E-Journal Portal 2.0** tab of the administration console.

There are several areas of E-Journal Portal customization; click on a title below to go to a document describing how to configure that option:
