Summon: Augmenting Your Library's Physical Collection With Full-Text Indexing

- **Product:** Summon

---

How is our library's physical collection augmented with full-text indexing in the Summon service?

A book in your library's physical collection is discoverable via its catalog record in the Summon index. The physical book is also discoverable via full-text searching of e-books from various providers. The [Match and Merge](#) technology within the Summon service matches your catalog record with the full-text record and presents the print record to your patron.
